Steel City® RPT6 Recessed Poke-Through Floor Box

Recessed service, 3-gang poke-through designed to fit in 6-in. holes in the second floor and above in commercial buildings.

- Greater capacity than typical 3-in. and 4-in. core poke-throughs
- Core drill size: 6-in.
- Solid brass, black and brushed aluminum finishes provide superior aesthetics and durability
- Customer can use off-the-shelf wiring devices
- Center compartment can accept GFCIs
- Recessed service conceals devices below floor level
- Configurable compartment bottom junction box includes a cover with 1-1/4-in., 1-1/2-in. or 2-in. knockouts
- UL 263 – 2-hour fire test

Given the limitations on the number of holes that can be drilled in a floor, it is important to maximize the capacity of each location. The RPT6 series offers a configurable solution that provides high capacity for both power wiring and communications cabling in a single-core drill location.
