

General information

Since the turn of the century, T&B Fittings brand has been a recognized leader in electrical fittings. Industry standards such as Chase® nipples and Erickson® couplings were introduced by T&B and are still registered trademarks. This leadership continues. Here's why.

Innovative designs

The real test of product design of electrical fittings lies in two areas: job-suited installation and life-of-the-job reliability. ABB provides both because we listen. We listen to problems and suggestions from the field. Most of the products in this section result from the good suggestions of knowledgeable electrical people. Many were custom designed to solve a customer's particular installation and performance problems. You can benefit from their experience.

Approvals and certifications

Electrical raceways require accessory fittings that provide the mechanical strength, ground continuity and environmental integrity of the system. As new raceways have been introduced, ABB engineers have designed fittings that meet the requirements of the Canadian Electrical Code, as well as the Canadian Standards Association. You can use T&B fittings with confidence.

Note: All dimensions in this catalogue are approximate.

High performance products

Quality and performance result when engineering design skills are combined with the manufacturing technologies required to produce them. The T&B fittings in this section are produced from many materials and by many manufacturing methods, each carefully selected for its end use suitability. This combination gives you the reliable performance you expect from T&B fittings.

Lower installed cost

Lower installed cost is a function of purchase cost, availability, installation advantage and performance; it comes in every carton of T&B fittings.
